Problem 1: 3D Segmentation

Data Loading

Function declarations

```
In [3]: def problem1_load_dataset(
        dir_path,
        img_column_name="image",
        label_column_name="label"):

    def _load_all_data_from_dir(dir_path, img_column_name="image", label_column_name="label"):
        def _load_h5_data(file_path, img_column_name="image", label_column_name="label"):
            data = h5py.File(file_path, "r")
            image = data[img_column_name][:]
            seg = data[label_column_name][:]
            return image, seg

        df_dict = {"image": [], "seg": []}
        for file_name in os.listdir(dir_path):
            file_path = os.path.join(dir_path, file_name)
            if os.path.isfile(file_path) and file_path.endswith(".h5"):
                image, seg = _load_h5_data(file_path)
                df_dict["image"].append(image)
                df_dict["seg"].append(seg)
        df = pd.DataFrame.from_dict(df_dict)
        return df

    df = _load_all_data_from_dir(dir_path, img_column_name, label_column_name)
    return df
```

Function utilization

Load 3D segmentation data from `problem1_datas` .

```
In [4]: df = {}  
df["train"] = problem1_load_dataset("./data/problem1_datas/train")  
df["test"] = problem1_load_dataset("./data/problem1_datas/test")
```

Preprocessing

Define transforms for the input image and the ground truth segmentation.

```
In [5]: imtrans = Compose(  
    [  
        ScaleIntensity(),  
        EnsureChannelFirst(),  
        CenterSpatialCrop([96, 96, 64]),  
        ToTensor(),  
        NormalizeIntensity(),  
    ]  
)  
segtrans = Compose(  
    [  
        EnsureChannelFirst(),  
        CenterSpatialCrop([96, 96, 64]),  
        ToTensor(),  
        NormalizeIntensity(),  
    ]  
)  
val_imtrans = Compose(  
    [  
        EnsureChannelFirst(),  
        CenterSpatialCrop([96, 96, 64]),  
        ToTensor(),  
        NormalizeIntensity(),  
    ]  
)  
val_segtrans = Compose(  
    [  
        EnsureChannelFirst(),  
        CenterSpatialCrop([96, 96, 64]),  
        ToTensor(),  
        NormalizeIntensity(),  
    ]  
)
```

Apply the transformations to the train and the valid set. The valid set is taken from `problem1_datas/test` .

```
In [6]: train_ds = ArrayDataset(df["train"]["image"], imtrans, df["train"]["seg"], segtrans)  
val_ds = ArrayDataset(df["test"]["image"], val_imtrans, df["test"]["seg"], val_segtrans)
```

Initialize the dataloaders.

```
In [7]: train_loader = DataLoader(train_ds, batch_size=2, num_workers=2, pin_memory=torch.cuda.is_available())  
val_loader = DataLoader(val_ds, batch_size=2, num_workers=2, pin_memory=torch.cuda.is_available())
```

Training and Evaluation

Function declarations

Initializer for the model and the optimizer.

```
In [8]: def get_model_and_optimizer(checkpoint_path=None, lr=1e-3, device="cuda:0"):
        device = torch.device(device)

Prediction results.

```
In [36]: net, opt = get_model_and_optimizer(checkpoint_path="./save/problem1/exp3/net_checkpoint_
```

```
In [52]: sample_ids = [12, 13, 14, 15]  
         for sample_id in sample_ids:  
             predict(net, val_ds[sample_id][0], val_ds[sample_id][1], sample_id=sample_id)
```

Input image #12 (top), predicted segmentation (middle), and ground truth segmentation (bottom)

Input image #13 (top), predicted segmentation (middle), and ground truth segmentation (bottom)

Input image #14 (top), predicted segmentation (middle), and ground truth segmentation (bottom)

Input image #15 (top), predicted segmentation (middle), and ground truth segmentation (bottom)

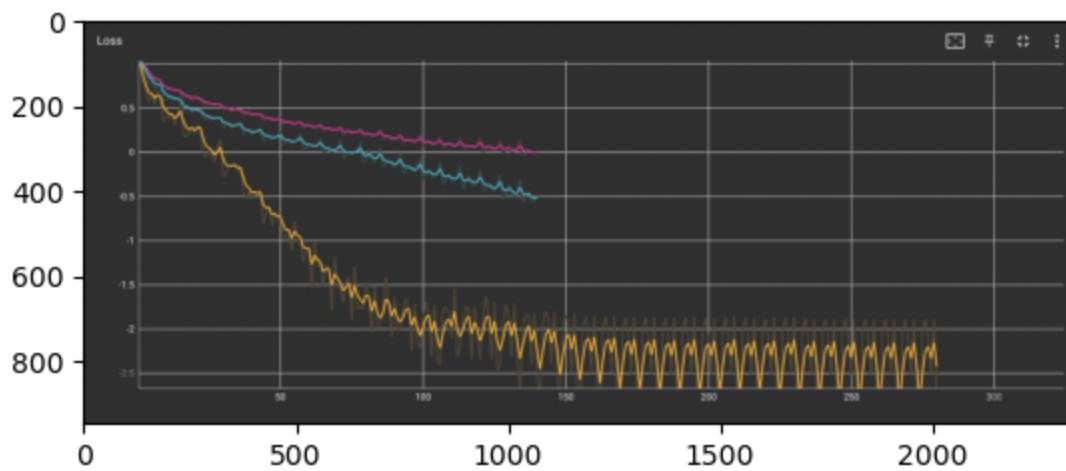

Conclusion

Train loss for Experiment 1 (light blue), Experiment 2 (pink), and Experiment 3 (yellow).

```
In [54]: plt.figure()
img = mpimg.imread("./log/problem1/exp_train_loss.png")
plt.imshow(img)
```

```
Out[54]: <matplotlib.image.AxesImage at 0x7f4664256cb0>
```

Exp. ID	Exp. Setting	Eval. ASD	Eval. Dice	Eval. Hausdorff (95%)	Eval. Jaccard
1	3D UNet (lr=1e-3)	3.15	<u>85.92%</u>	12.40	75.75%
2	3D UNet (lr=5e-4)	3.34	86.03%	12.16	76.02%
3	3D UNet (lr=5e-3)	5.19	64.39%	17.89	48.06%

In this notebook, I have:

- 1) tried out 3 different experiment configurations;
- 2) reported the results (i.e., train loss, eval loss, eval dice, eval ASD, eval hausdorff, and eval jaccard);
- 3) showed the train loss curve and predicted segmentation results (in the form of 2D slices); and
- 4) achieved a best performance of 86.03% using 3D UNet (through Experiment 2) for 3D segmentation on medical data.
